## **Crimping Applicator**

## Precise applicators for wire processing

We offer crimping applicators for establishing connections between contacts and lines with different cross sections. Standard tools with mechanical or pneumatic feed are available from Schäfer for the usual crimping processes.

Individual customer requirements are included for the development of new variants. The crimping height can be adjusted precisely in 0.02 increments in the wire area and in the insulation area. Crimping applicators with upstream bending module for contact forming, simultaneous processing of two contacts, or connecting of machined contacts in four-point crimping applicators, are examples of special solutions.
